

ROLLED & WELDED TUBE

Deepdale Engineering offers a complete service to industry covering fabrication and testing of rolled & welded tube.

Rolled tube is fully automatic submerged arc welded to all major codes in carbon and stainless steel.

Rolled & welded tube up to 4600mm diameter x 50mm thick can be produced in various lengths.

All weld processes are available, welders are coded to EN287/288 & ASME standards.

In-house N.D.T. facilities are available and in addition ancillary services such as Machining, Shot-blasting & painting are available locally.

TYPICAL APPLICATIONS:

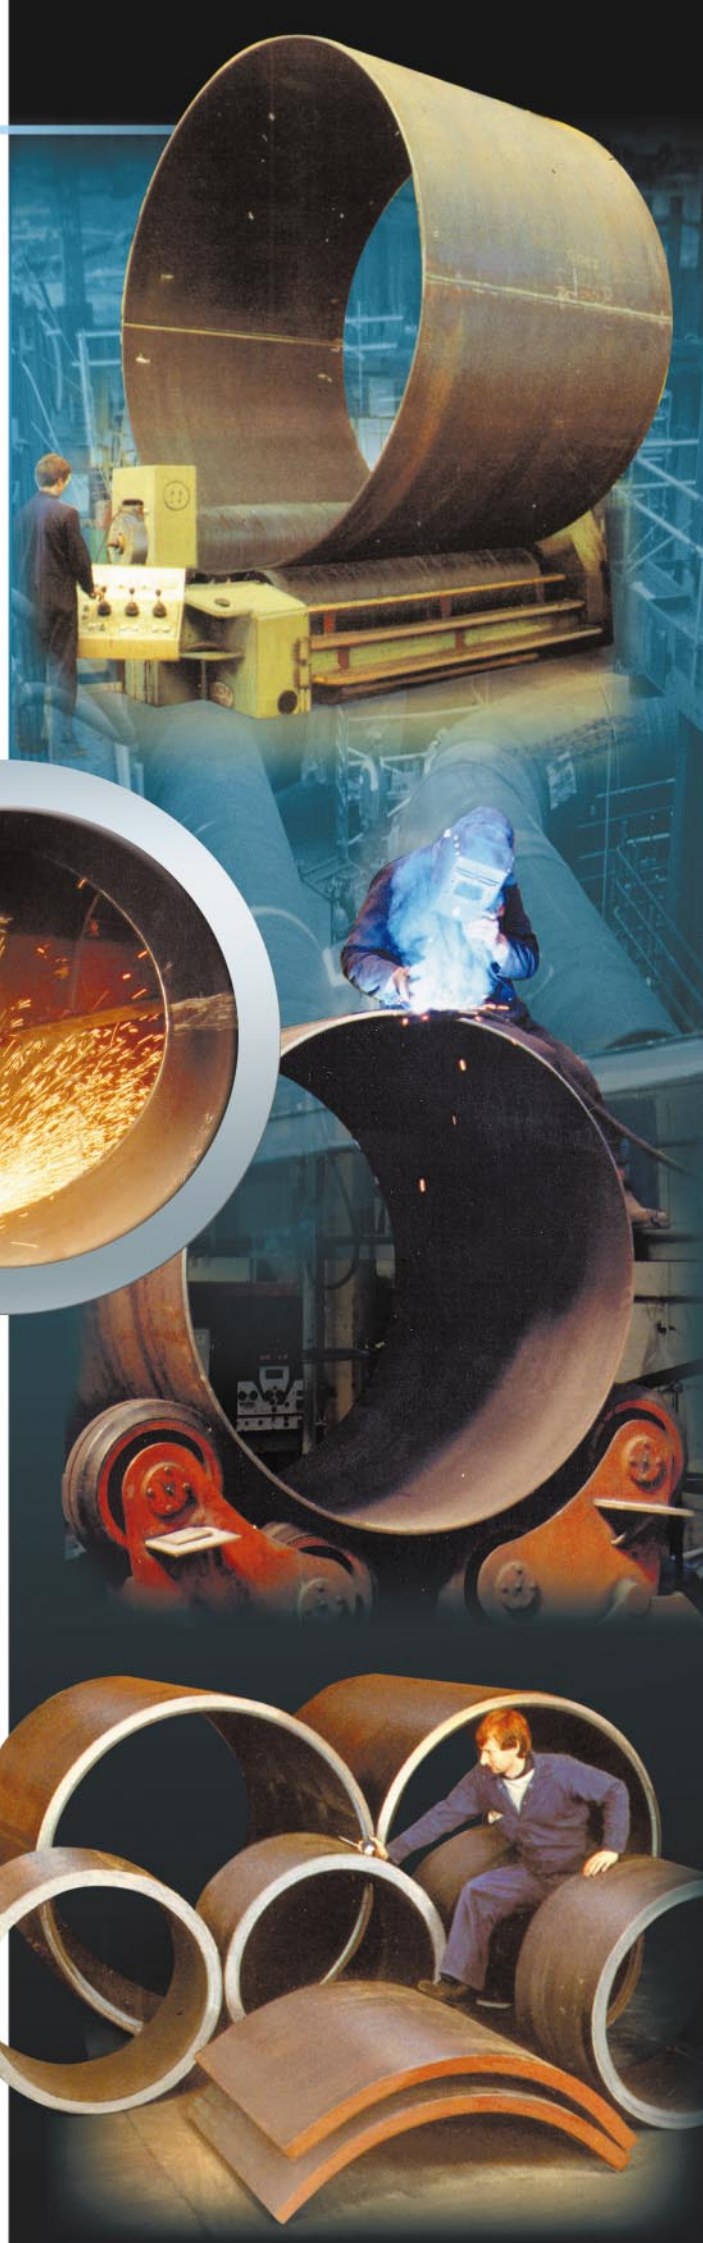

Deepdale have supplied rolled & welded tube to all sections of industry including:

- Water Authorities
- Petro-Chemical
- Oil and Offshore production
- Piling contractors
- Fabrication companies
- Major consultants in the pipework field

Whatever your individual needs, we are sure that, by speaking to Deepdale's team of experienced engineers, a solution to your problem is just a phone call away.
